

ASP FACTS

FEATURE: Kwik Key®

ADVANTAGE:

Removing handcuffs from a large, muscular individual or under low light conditions can be difficult. The Kwik Key feature allows the officer to rapidly locate the keyway of a standard handcuff by feel alone. The back set Kwik Key provides rapid key insertion and removal of cuffs.

SPECIFICATION:

- Ease of keyway location
- Ease of key alignment
- Effective with large, muscular subjects
- Effective in low light
- Makes blind location and alignment possible
- .025" back set tab
- Patent Pending

PERFORMANCE:

The back set Kwik Key feature dramatically improves the location of a keyway and removal of handcuffs. The feature is particularly helpful in situations where a large number of handcuffs must routinely be removed such as jail and correctional environments.

SALES STRATEGY:

Demonstrate the ease with which a Kwik Key can be "blindly" inserted into a handcuff and aligned. Show officers how the back set tab of a Kwik Key can be inserted into a handcuff keyway by feel. Explain the importance of keyway location in both a training environment and when dealing with handcuffed subjects.
